

One physician told the Hirschfeld's that Jake had no better than a one in ten chance of living outside of institutional care. Jake's mother, Nancy, recalls that "one preschool initially turned away our son because of their fear of autism, but once they began to see Jake as a person who had unique gifts as well as challenges they accepted him."

Thankfully, the Hirschfeld family persevered and sought services to help their son. Their search led them to engage an intensive early intervention therapy called Applied Behavior Analysis, or ABA. This therapy has been available for over twenty years, and was recently featured on NBC Nightly News and ABC's Primetime Live. It is one of the treatments that can significantly reduce the symptoms of autism. Because the cause or causes of autism have yet to be identified, early intervention is the best course available for parents today.

Unfortunately, these services are not universally supported by public or private insurance, so families like the Hirschfeld's pay up to \$60,000 per year to help their children. In the State of Nebraska, there are now organizations who offer these services, including the Families for Effective Autism Treatment, or FEAT. Although FEAT now serves over 20 families in Eastern Nebraska, countless other families nationwide cannot access this treatment because of its prohibitive cost.

But the tremendous investment can pay great dividends. Jacob Hirschfeld could once barely speak, but he was recently one of the stars in an Easter musical at his school. He was once scared of most people, but is now regularly seen riding his bike around the neighborhood, greeting neighbors and playing with friends. And yes, he plays a pretty decent game of baseball. Jake has come a long way, but he will continue to need services to help him along his journey, just as many autistic children in America need support and care.

Early intervention has also made a difference in the lives of Patrick and Jean McDermott, and their son, Grant, who was diagnosed with autism when he was 22 months old.

Grant's mother Jean said "it was devastating to hear the words 'diagnosis of autism' as parents of this beautiful child. My husband and I wondered what his future would hold. After the initial shock, we started researching what we could do to give him a brighter future."

The McDermott's also chose the ADA early intervention therapy. Therapists worked with Grant about 35 hours a week, teaching him basic and then more advanced skills. Grant is now in regular school with no aides, and will be going to kindergarten this Fall. His future is looking bright and the McDermott's believe he will live a full life, but it will always be a challenge having an autistic son until a cure can be found.

Autism now affects 1 out of every 166 children in the United States. Boys are four times more likely to have autism than girls. This developmental disorder robs individuals of their ability to communicate and interact with others. Some autistic children seem barely able to distinguish their parents from strangers.

The costs of caring for autistic individuals is high financially as well as emotionally. Nationwide, an estimated \$90 billion is spent every year. Specialized treatment in developmental centers costs about \$80,000 per child, and special education programs cost about

\$30,000 per autistic child. Services are needed to help reduce these burdens on families and society.

Mr. Speaker, there is a great need for increased public awareness about autism, and more aggressive research into this disorder to help American families like the Hirschfeld's and the McDermott's. I am proud to be a co-sponsor of H. Res. 605, and urge my colleagues to join me in wholeheartedly voting for its passage today.

RESOLUTION EXPRESSING THE
SENSE OF THE HOUSE THAT
THERE IS A NEED FOR IN-
CREASED EDUCATION AND
AWARENESS ABOUT HEPATITIS C

HON. TOM UDALL

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 6, 2004

Mr. UDALL of New Mexico. Mr. Speaker, May has been designated as Hepatitis Awareness month. In light of that, I rise today to highlight one type of Hepatitis that is an important health issue facing our country—the Hepatitis C virus. Hepatitis C is now the most common bloodborne infection in the United States infecting an estimated 2.7 million Americans and more than 32,000 in my home State of New Mexico alone. Further exacerbating the situation is the fact that it is estimated that less than 5 percent of individuals with Hepatitis C are receiving treatment. These statistics alone underscore the critical need to increase education and awareness about this virus. Today I am introducing a resolution that calls for exactly that.

Mr. Speaker, in addition to the figures I mentioned above, it is also worth noting that approximately 80 percent of those infected with Hepatitis C develop chronic liver disease with an increased risk for development of cirrhosis and liver cancer. In fact, in the United States Hepatitis C is estimated to be the cause of 40 percent to 60 percent of cases of chronic liver disease and 8,000 to 10,000 deaths annually.

One population in our society for whom Hepatitis C is a particular concern is our veterans. A study released in July 2003 measured the prevalence of Hepatitis C in a sample of veterans treated in a homeless veterans program in Massachusetts over a five-year period. The study found an overall prevalence rate of HCV infection of 44 percent, a rate more than 10 times higher than the national rate for men age 20–59. According to the study, adjusting for age, significant risk factors in the sample included a history of substance abuse and service during the Vietnam era. However, this is by no means the only at-risk population.

Native Americans are another segment of our population who are experiencing the destructive effects of the Hepatitis C virus. Although Native Americans experience infection rates on average with other populations, because of other obstacles to accessing care and accessing quality care, they are experiencing much higher death rates and years of life lost as a result of chronic liver disease.

Mr. Speaker, these are but two examples of specific demographic groups dealing with the realities of the Hepatitis C virus. But as indi-

cated by the number of Americans infected with this virus it is clearly a much more widespread concern. As a nation we must begin confronting the rising human and economic costs of this virus. And we in Congress must begin confronting the policy choices we need to make to stem these costs. Passing this resolution will be an important step in this process.

EXPRESSING CONCERN OF CON-
GRESS OVER IRAN'S DEVELOP-
MENT OF MEANS TO PRODUCE
NUCLEAR WEAPONS

SPEECH OF

HON. JIM McDERMOTT

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 5, 2004

Mr. McDERMOTT. Mr. Speaker, I abhor nuclear weapons and would like nothing better than to see the world free of these weapons. I believe that Iran is a nation that we cannot trust. I also believe the House Concurrent Resolution rushed through Congress by the Republicans with little debate and even less clarity in intent is wrong, and I cannot support it.

The wording of the Iran Resolution reminds me of the blank check the President got for Iraq. Here's what I mean. The relevant portion of Section 2 of the Iran Resolution says: "... to use all appropriate means to deter, dissuade and prevent Iran from acquiring nuclear weapons. . . ." We must not make the same mistake twice. We need to deal with Iran. We need to deal with nuclear weapons programs, but this is not the way to do it.

REMARKS BY THE HONORABLE
DAVE OBEY

HON. TAMMY BALDWIN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 6, 2004

Ms. BALDWIN. Mr. Speaker, I rise to submit the humble, humorous and insightful remarks of my dear friend and Dean of the Wisconsin Congressional Delegation, the Honorable DAVE OBEY. The gentleman was the honored guest recently at the University of Wisconsin-Madison's Department of Political Science as it celebrated its Centennial. I was given a copy of his remarks and was captivated. Written with his characteristic no nonsense Wisconsin affect, this wonderful speech is a treasure to be shared. To that end, I submit it for the CONGRESSIONAL RECORD.

I came to Madison in 1958—after two years at the UW-Marathon County Center in Wausau—to get a poly-sci degree.

Arthur Henderson, my high school history teacher, who had worked with the great William Hesse, told me that I should seek out Ralph Huitt as my faculty advisor and take as many courses from him as possible if I wanted to understand how government and politics really worked. That's exactly what I did.

I had many other fabulous professors: Leon Epstein, Bernie Cohen, Fred von der Mehden, David Fellman, John Armstrong, Henry Hart, to name a few.
